

Come On Docker ♥

吉你

# Kubernetes : Sweets and Bitters

# Hello!

## I am Tom Tsai

I am here because I want to give life to the servers

- ▷ Startup (DevOps)
- ▷ Trend Micro (QA, DevOps)
- ▷ DevOps Lecturer

*Have You Organization Adopted Any  
Container Orchestration ?*

# Outline

- ▷ Kubernetes Introduction
- ▷ Access Kubernetes API
- ▷ Kubernetes CI/CD Pipeline
- ▷ Container High Availability
- ▷ Kubernetes Misc
- ▷ Q & A

1.

# Kubernetes Introduction

Without Kubernetes

With Kubernetes

Kubernetes Master

Replication Controllers

# K8S Infra

node 1

Services

Kubernetes Pod 1

container 1

container 2

Kubernetes Pod 2

container 1

container 2

node 2

Services

Kubernetes Pod 3

container 1

container 2

Kubernetes Pod 4

container 1

container 2

# Kubernetes Terminology

## Pod

A group of one or more containers

## Replica Set

Ensures that a specified number of pod “replicas” are running

## Deployment

Provides declarative updates for Pods and Replica Sets

## Service

a logical set of Pods and a policy by which to access them

Service

Deployment

Replica Set

Pod

Container 1

Container 2

Replica Set

Pod

Container 1

Container 2

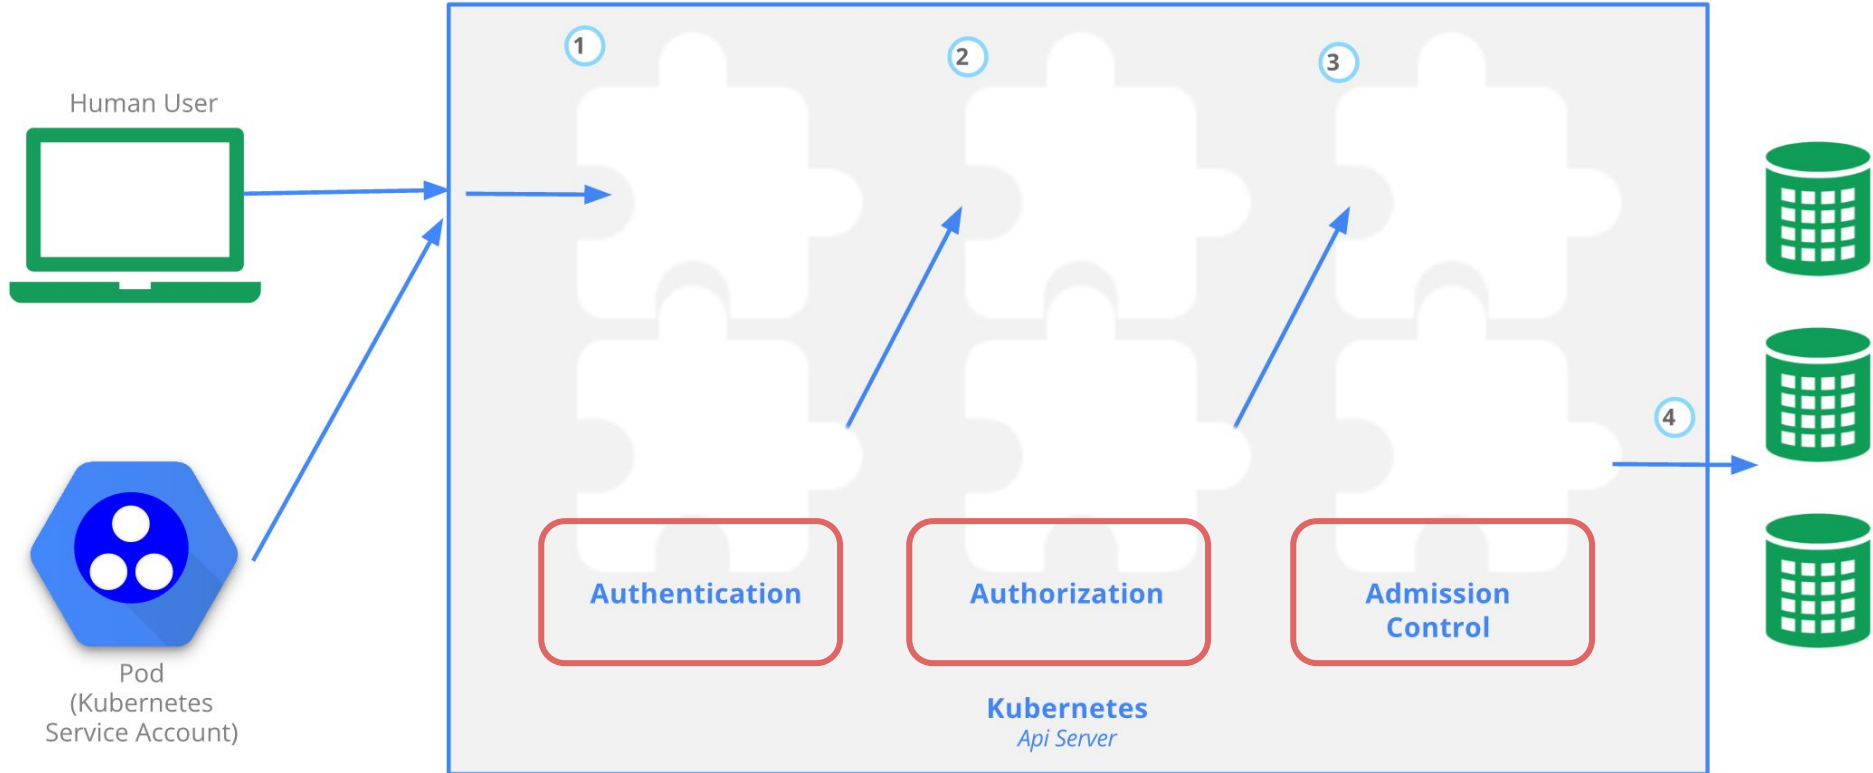

2.

# Access Kubernetes API

# Access Kubernetes API

# User Account V.S. Service Account

**User Account**

**Service Account**

# Authorization Mode

- ▷ AlwaysDeny, AlwaysAllow, ABAC
- ▷ ABAC Mode
  - user, readonly, resource, namespace
  - {"user":"bob", "resource": "pods",  
"readonly": true, "ns": "projectCaribou"}

# Real Practice

	Alpha (readonly)	Staging (readonly)	Prod (readonly)
Jenkins	False	False	False
Human	False	True	True

# Kubectl V.S. Restful API

```
~$ kubectl delete deployment nginx
```

DELETE

/apis/extensions/v1beta1/namespaces/default/deployments/nginx

# Kubectl V.S. Restful API

```
~$ kubectl delete deployment nginx
```

deployment, replica set,  
pod are deleted from K8S

only deployment is  
deleted from K8S

DELETE

/apis/extensions/v1beta1/namespaces/default/deployments/nginx

3.

# Kubernetes CI/CD Pipeline

# Jenkins Integrate With Kubernetes

1. Create Deployment
2. Update Image ver.
3. Create Service
4. Of course, Testing

K8S Restful API

# Actually Happened... (1/3)

Using Template Language to  
create Deployment, Service  
YAML File

- Chef: ERB
- Ansible: Jinja2

```
...  
containers:  
- name: nginx  
  image: "10.1.1.1:500/web/nginx:{{ image_tag }}"  
...
```

# Actually Happened...(2/3)

HTTP POST ([Reference](#))

```
/api/v1/namespaces/{namespace}/services/{name}
```

```
/apis/extensions/v1beta1/namespaces/{namespace}/deployments/{name}
```

# Actually Happened...(3/3)

HTTP PATCH ([Reference](#))

```
/api/v1/namespaces/{namespace}/services/{name}
```

```
/apis/extensions/v1beta1/namespaces/{namespace}/deployments/{name}
```

4.

# Container High Availability

# Container Alive V.S. Service Alive

- ▶ **Container Alive != Service Alive**
- ▶ When Container Dead, Restarting Pod Automatically
- ▶ When Service Dead ?

# Liveness Probes

- ▷ Check Whether Service Alive Or Not
- ▷ Restart Pod If Service Unavailable
- ▷ [Exec Liveness](#)
- ▷ [Http Liveness](#)

# Readiness Probes

- ▷ Check Whether Service Alive Or Not
- ▷ Bind Pod If Service Ready
- ▷ Unbind Pod If Service Unavailable
- ▷ [Exec Liveness](#)
- ▷ [Http Liveness](#)

# Termination Notice

- ▷ Grace Terminate Container
- ▷ Send SIGTERM to applications
- ▷ pre-stop lifecycle hook

5.

# Kubernetes Misc

# Daemon Set

- ▷ Daemon Set ensures that all (or some) nodes run a copy of a pod
- ▷ Rolling Update Issue

# Deploy Daemon Set Workaround

- ▷ Replace Instead Of Rolling Update
- ▷ Deployment + hostPort Instead Of Daemon Set

ports:

- containerPort: 9999

name: for-deployment

hostPort: {{ 2000 | random(start=1000, step=10) }}

# Troubleshooting

## ▷ Official Support Document

- ~\$ kubectl get {resource\_type} | grep {name}
- ~\$ kubectl logs {pod\_name}
- ~\$ kubectl describe {resource\_type} {name}
- ~\$ kubectl edit {resource\_type} {name}
- ~\$ kubectl exec -it {pod\_name} bash

# Update V.S. Replace

- ▶ Rolling Update K8S Resource First, Reduce Service Downtime
- ▶ Increase `terminationGracePeriodSeconds` if needed
- ▶ But It's Necessary To Replace Resource Sometimes...

# Capability

Unfortunately, I cannot disclose these details.

你 Pod 數有多高？

Which Loading Is Higher?

Pod Number	Container Per Pod
100	10
10	100

# Access K8S From External

# Access K8S From External

# Thanks!
